

## Alternative Funding Solution

Featuring a Payment Portal  
and participant notifications

---

### Use Cases:

-Enrollment is captured through a Merchant Gateway partner supported by Paylogix Consolidated Billing® Services.

- Merchant Gateway connection allows the enrollment technology to securely capture and pass payment data to Paylogix at the time of enrollment.
- The payment portal and notifications can be utilized post enrollment providing the policy holder with access to manage their payment information and notification settings.

-ACH/Credit Card information was not captured at the time of enrollment and Paylogix is providing Consolidated Billing® services.

- Sometimes enrollment is not captured under the most ideal conditions or the deduction method changes after enrollment is complete and payroll is no longer an option.
- The payment portal combined with participant notifications can notify the policy holder that their payment data is missing and provide them with a secure way to add and manage their payment detail.
